SUMMARY

Software Development Lead with 8+ years of experience in software engineering, technical leadership, and delivery of business-critical applications. Experienced in leading development teams, mentoring engineers, driving large-scale modernization initiatives, and delivering secure, high-quality software. Strong technical background in C#/.NET, SQL, DevOps, cloud technologies, and software architecture, with a proven track record of translating complex technical initiatives into measurable business and customer impact.

WORK EXPERIENCE

RedSail Technologies

2023 - PRESENT

Software Development Lead

Shreveport, LA

- Leads a team of six engineers across onshore and offshore teams, providing technical direction, mentorship, project planning, and delivery oversight while developing engineers for increased ownership and leadership responsibilities.
- Drives project planning and execution using Agile practices, translating new initiatives into defined epics, tickets, requirements, and estimates for development teams.
- Leads the modernization of the PioneerRx ecosystem from .NET Framework 4.8 to .NET 10, including the primary WinForms application and supporting Windows services.
- Designed and developed a credit card tool, helping customers identify and process more than \$1M in outstanding transactions.
- Led the design, estimation, and delivery of PioneerRx POS integration with Puerto Rico IVU tax reporting, completing the initiative ahead of schedule.
- Led application performance improvements that reduced median prescription load time across production environments from approximately 3 seconds to 1 second.
- Served on the Security Champions board, reviewing, implementing, and advising on application security best practices; led remediation of identified vulnerabilities down to zero, and integrated Snyk scanning into PR pipelines.
- Designed and developed full-stack AI functionality integrating an internal Azure-hosted model, enabling users to upload images and files for AI-powered interpretation and responses.

PioneerRx

2018 - 2023

Software Developer

Shreveport, LA

- Became the primary developer responsible for critical production data synchronization processes, ensuring data accuracy and availability.
- Developed critical prescription dosage validation functionality to improve patient safety, introducing safeguards across a platform serving 7,000+ pharmacies.
- Built application performance telemetry to measure load and save times across production environments, including collection and analysis of median prescription load times used to identify and validate performance improvements.
- Designed and implemented the company's SQL version-control process, introducing Git-based source control, pull-request reviews, and CI/CD pipelines for managing and deploying SQL changes to production.
- Expanded into DevOps and release engineering, building CI/CD pipelines and becoming a key administrator and technical resource for the company's on-premises Azure DevOps environment.

Graduate Research Assistant

2017 - 2018

Louisiana State University Shreveport

Shreveport, LA

- Implemented various applications using Java, R, PHP, and MySQL for the analysis of biological, chemical, and medical processes, aiding advancements in medicine and patient care.
- Developed a web application for medical students, enhancing learning through interactive case studies.
- Maintained weekly communications with doctors to align on research projects, ensuring practical application of findings.
